

# CLEANER & HEALTHIER HOME GUARANTEED

clean, sanitize, disinfect your home with **Steamkleen**

*Safe and Superior  
result without chemicals!*

## Conventional cleaning using chemicals

Chemicals can only clean the top of surface, not deep inside

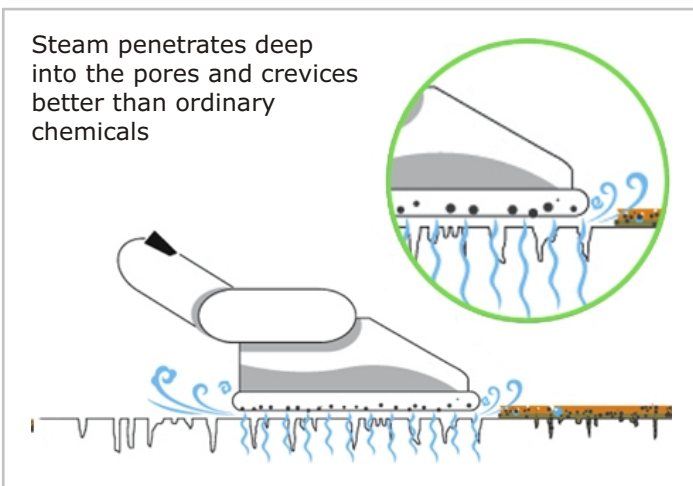

- Chemicals is not safe (in both application and storage) and environmentally friendly. Studies show links between chemicals in common household cleaners and respiratory irritation, asthma, and allergies. Exposures to toxic cleaning products, are associated with nervous and reproductive system damage and birth defects.
- Effectiveness of using chemicals depends on proper applications, tools and procedures. Over reliance and misuse of antibiotics causes bacteria to develop antibiotic resistance, which has become a global health crisis.
- Harsh and abrasive chemicals may damage the surface you are trying to clean or making it more accessible for dirt and bacteria.
- Messy application in most cases requires additional pre-cleaning and post-rinsing work.

## steamkleen using plain water

Steam penetrates deep into the pores and crevices better than ordinary chemicals

- Superior results – clean, sanitize and disinfect in one step.
- Safe and environmentally friendly.
- Heat kills allergens, germs and bacteria instantly.
- Easy, fast & mess-free – surface is dry instantly.
